

COFIRING 9 JAPAN WORKSHOP 25-27 FEB 2020

Development of cofiring biomass with coal in China under the low-carbon energy transition

HuWenping
China Electric Power Planning & Engineering Institute

China is vigorously promoting the development of energy and power structure toward low carbonization. In this context, China has made full use of the platform role of clean and efficient coal-fired power plants to actively promote cofiring agricultural and forestry biomass, sludge, garbage etc. with coal, playing a positive role in promoting the low-carbon transformation of energy and power structure in China.
